(a) towards $2/\mathrm{vol}(\Gamma_0(D)\backslash\mathbb{H}) = 6/(\pi\psi(D))$ (dotted)
$\|G_{1,p}^{(D)}\|^2/(\log p)^2$
p
$D = 3$
$D = 4$
$D = 7$
$D = 8$
$D = 11$
$D = 19$
$D = 43$
$D = 67$
$D = 163$
(b) the growth constant against D, all nine discriminants
coefficient of $(\log p)^2$
D
$6/(\pi\psi(D))$, D prime
fitted a in $\|G\|^2 - B_D \log p = a(\log p)^2 + c$
