(a) towards $2/\mathrm{vol}(\Gamma_0(D)\backslash\mathbb{H}) = 6/(\pi\psi(D))$ (dotted)
$\Lambda_1(G_{1,p}^{(D)})/(\log p)^2$
p
$D = 3$
$D = 4$
$D = 7$
$D = 11$
$D = 19$
$D = 43$
$D = 67$
$D = 163$
(b) the growth constant against D ($D = 8$ not computed)
coefficient of $(\log p)^2$
D
$6/(\pi\psi(D))$, D prime
fitted coefficient of $(\log p)^2$ ($D = 4$: Part II)
