(a) the three newforms of level 77 ($a(7) = +1$, $a(11) = -1$) in the two theta series
share of $\|G^{(7)}_{1,11}\|^2$
share of $\|G^{(11)}_{1,7}\|^2$
share of the norm

$a(2) = +2.236$
(b) $\langle \Theta^{(D)}, \varphi \rangle = C_D\, \chi(p) \eta_p(\varphi)\, L(1, \varphi) L(1, \varphi \otimes \chi_{-D})$: the twist decides
$L(1, \varphi)$
$L(1, \varphi \otimes \chi_{-7})$ (twist level 539)
$L(1, \varphi \otimes \chi_{-11})$ (twist level 847)
